

# Assignment 01

**College:** CUNY School of Professional Studies  
**Course-Name:** Software Application Programming I  
**Course-Code:** IS 210  
**Lesson:** 01  
**Points:** 20

## Overview

This week's assignment will test that you have properly accessed your course materials and installed and created your development environment. There are three tasks you must complete in order to receive full credit.

## Tasks

Please submit task via Blackboard.

### Task 01: Create your Github Account

If you don't yet have a (free) GitHub account, create one. Post your GitHub username in the body of the assignment to receive full credit for this task. Although you can access the homework materials via Github without having created an account, it is a good idea to have one as you start your journey as an application developer.

### Task 02: Why Python

According to Mark Lutz in our course text, *Learning Python, Fifth Edition*, what are the six reasons people use Python? Post your answer in the body of your assignment response.

## Submission

Submit your answers in Blackboard in order to receive credit. All answers must be submitted by the due date (review the assignment in Blackboard to see the due date).
